

ONLINE ORIENTATION

SPECIAL EDUCATION NEEDS

Special Education is the term used to describe learning opportunities for **PERSONS** with disabilities.

- According to a 2010 UNESCO report, disability is a “multidimensional and complex construct involving legal, political, and social discourses”.

Special Education is the term used to describe learning opportunities for **PERSONS** with disabilities.

- According to a 2010 UNESCO report, disability is a “multidimensional and complex construct involving legal, political, and social discourses”.

This presentation will provide opportunities to acquire knowledge of...

... different aspects of Special Education and ...

- ... understand varied nuances of Special Education teaching.

With regard to different aspects of Special Education,

- First we will examine the various groups involved in the Special Education system.

- Then, we review the different classifications that are considered “disabilities” and eligibility for Special Education services.

Lastly,

- We will examine the “Best Practices” as suggested by today’s research.

- Some people think in picture. We learn from maps, charts, graphs, photos, & cartoons. We are called iconated thinkers.

What causes a person to be disabled?

- Historically, in some cultures, it was believed that having a child born with a disability, represented a curse upon the family. As such, s/he was cast out as a means of purification.

What causes a person to be disabled?

- In other cultures, the opposite was true. A child with a disability received respected status as a talisman providing good luck and protection to the community.

Today we still hold some historic perceptions and prejudice.

- It is not too long ago that a person with epilepsy was seen as being demonically possessed.

- Or that a person with Tourette's Syndrome, with its tics, repetitive movements, and vocalizations, was perceived as a victim of witchcraft.

In general, what is a disability?

- It is a **physical** or **mental** condition that **limits** a person's **movements, senses, or activities**. It is the traditional role of Special Education to address the learning challenges faced by individuals with disabilities.

Besides individuals with disabilities, other groups are involved in Special Education.

- Families Perspectives:
Provide information about health, development, and emotional history.

- Child's Social Group:
Acceptance or Bullying

- Policy and Law: Legislation and Court Decisions

- Community:
- Institutionalization
- Isolation
- Integration
- Inclusion

Social Policy, Community, and Culture

- **Perceptions & Assumptions →**
- *Lazy, dumb, stupid, cretin, dimwit, dullard, brainless; IQ Tests = moron > imbecile > idiot*

- *If I believe something to be true, whether or not it is true, causes me to act in a predictable way.*

Classroom Practice: Historic Perspective

- *19th century Education for Visual and Hearing Impaired*

- *Perkins School
for the Blind*

- *Gallaudet School
for the Deaf*

Classroom Practice

- *Most other disabilities failed to be identified or were ignored as recently as the mid 20th century*

INSTITUTIONALIZATION → *Agnew State Developmental Center*

Classroom Practice *

- **ISOLATION** → The Retard Room

- *What do you notice about these children?*

Classroom Practice

- **INTEGRATION** → *The Resource Room*
- This program usually involved pulling the students from their regular classrooms to provide individual curriculum and programming for their special needs.

Classroom Practice

- **INCLUSION** →

- Provides opportunities for students with disabilities to learn alongside their non-disabled peers in general education classrooms with the support of Special Education teachers, Aides, Accommodations and Modifications.

What is a disability?

- As it relates to educational law, a **DISABILITY** is “a disorder in one or more of the basic neurobiological processes involved in understanding or in using language, spoken or written, that may manifest itself in the imperfect ability to listen, think, speak, read, write, spell, or do mathematical equations”.

When you think of these terms, what words come to mind? *

- **DYSLEXIA**
- **ADD / ADHD**
- **DYSCALCULIA**
- **DYSGRAPHIA**
- **SENSORY PROCESSING DISORDERS**

Classification of Disabilities

- **SPECIFIC LEARNING DISABILITIES:** Affect ability to read, write, listen, speak, reason or do math. Here are some of the issues that could fall in this group:
 - *Dyslexia*
 - *Dysgraphia*
 - *Dyscalculia*
 - *Auditory Processing Disorder*

Specific Learning Disabilities

- **Dyslexia:**

Neurobiological in origin, it is characterized by difficulties with accurate and/or fluent word recognition and by poor spelling and decoding abilities. At least, 10% to 15% of students in India suffer from this disorder. Multilingualism may impact this as well.

- **Dysgraphia:**

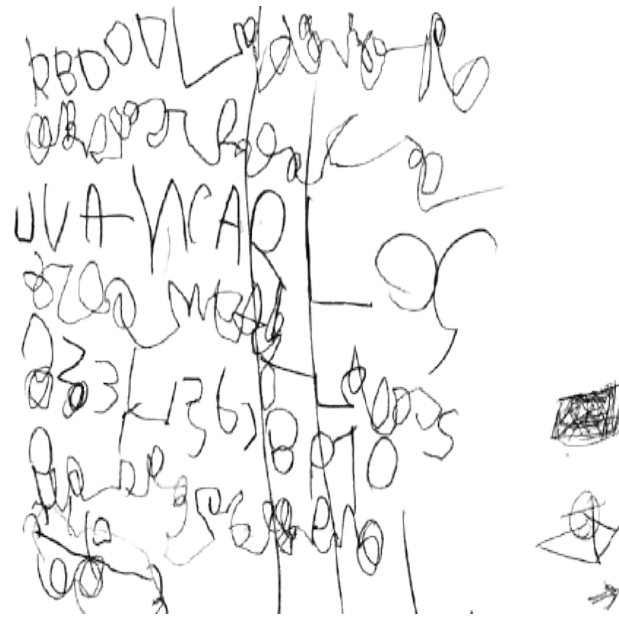

Associated with impaired handwriting, coding (the storing process of written words and processing the letters in those words), and finger sequencing (the movement of muscles required to write). It is believed that about 5% of students in India have this disorder.

Specific Learning Disabilities

- Dyslexia

"I have **dyslexia**" was extremely hard for me to say to anyone. It was like saying "I am stupid." I didn't believe that I am stupid. I didn't know if the person I was telling understood what it means to have dyslexia. I once told a close friend and her response was "I didn't know you weren't normal."

- Dysgraphia

Handwritten text illustrating dysgraphia, showing a list of names and numbers that are difficult to read due to poor penmanship. The text includes:

- BBDDL
- UVA VCAO
- 0700
- 03/136
- 0005
- 0001

There are also some illegible scribbles and a small diagram of a triangle with an arrow pointing to it.

DYSLEXIA impedes the student's ability to read and comprehend a text.

- Among five of the critical components in reading instruction are:

1. Phonetic Awareness
2. Phonics
3. Fluency
4. Vocabulary
5. Text Comprehension

Phonemic Awareness is ...

- ... a major aspect of literacy that is essential for children to develop before they can begin learning to read. Based in oral language, phonemic awareness serves, as not only the foundation for reading, it is also one of the strongest indicators of a child's potential for learning to read, and essential to reading comprehension success. **The most critical predictor of success is whether a child has been read to!**

DYSGRAPHIA: Statistics

- Researchers have so far identified 5 subtypes of dysgraphia including ones tied to dyslexia, motor skills, spatial and visual skills, as well as phonological issues. It is not uncommon for a person to have more than one Learning Disability. This is known as “comorbidity”.

People with Dysgraphia ...

- Often have a higher than average IQ, but lack co-ordination, and may find other fine motor tasks such as tying shoes difficult, although dysgraphia often does not affect all fine motor skills. These individuals can also lack basic spelling skills (having difficulties with p,q,b,d), and often will write the wrong word when trying to formulate thoughts.
- *Thought/Though/Tough/Through/Thorough*

Specific Learning Disabilities

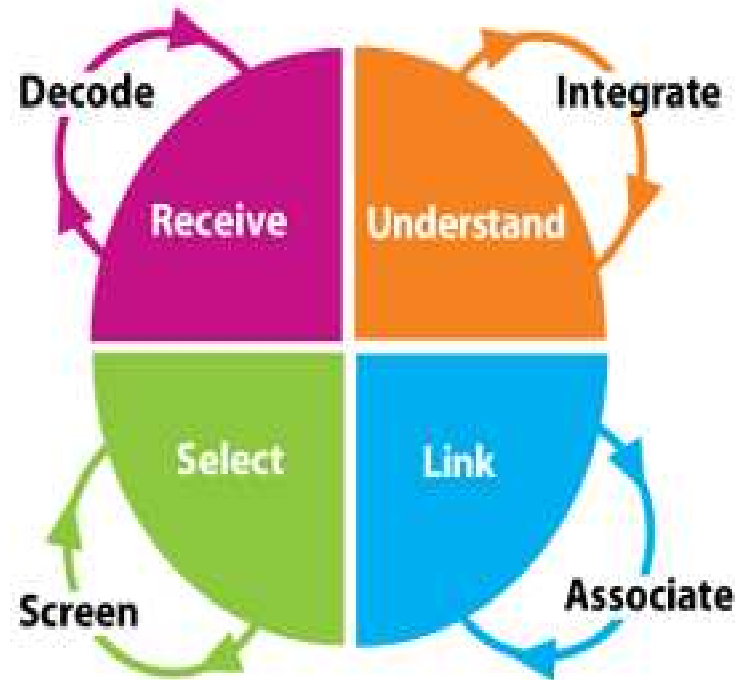

- **Dyscalculia:**
- Difficulty in understanding numbers, learning how to manipulate numbers, and learning facts in mathematics. Current research suggests that between 3% and 14% of children may have mathematical difficulties.
- **Auditory Processing Disorder:**
- Affects how the brain integrates spoken language which makes it difficult for the child to process verbal instructions or even to filter out background noise in the classroom. Percentage of students with this disorder range from 2% to 7%.

Specific Learning Disabilities

- Dyscalculia

Processing Disorders

Specific Learning Disabilities

- **Other Health Impairment:** Limits a child's strength, energy or alertness. One example is attention issues like **ADD** and **ADHD**. In Primary Schools, the percentage of students identified was 11.32% (3:1 M:F)
- **Autism Spectrum Disorder:** Affects a child's social and communication skills. It can also impact behavior. Its mildest form is known as **Asperger's Syndrome**. Diagnosis ranges from .23% to 1.8% in India.

Specific Learning Disabilities

ADD / ADHD

AUTISM SPECTRUM

The signs of Autism..

The infographic illustrates various signs of autism spectrum conditions through cartoon illustrations of children and their actions:

- Inappropriate playing with toys:** A child is shown playing with a toy car on the floor.
- Inability to relate to others:** A child is shown sitting on the floor, looking away from two other children who are playing together.
- Hyperactivity or Passiveness:** A child is shown in a state of distress, crying.
- Inappropriate laughing or crying:** A child is shown laughing or crying in an unusual context.
- Oversensitive or undersensitive to sound:** A child is shown covering their ears, reacting to a sound.
- Strange attachment to objects:** A child is shown holding a green leaf in their mouth.
- Poor speech or lack of speech:** A child is shown looking at a hand holding a red cup, appearing confused or unable to respond.
- Difficulty dealing with changes to routine:** A child is shown reacting to a change in routine, such as a car being moved.
- Lack of awareness of danger:** A child is shown standing next to a red car, unaware of the danger.

HALCYON
Registered Charity No. 1141555
Providing specialist training to people dealing with challenging behaviour
www.halcyon-foundation.org.uk
Tel: 02820 553919

- Also, children with ADHD /ADD or oppositional defiant disorder (ODD) tend to not to display such personality traits.

Specific Learning Disabilities

EMOTIONAL ISSUES:

Includes mental illnesses such as Anxiety Disorder, Schizophrenia, Bipolar Disorder, Depression and Obsessive-Compulsive Disorder. In ages 4-16, 12% of population are affected. High suicide rate

SPEECH OR LANGUAGE IMPAIRMENT:

Communication problems including stuttering, impaired articulation, language or voice impairment.

Specific Learning Disabilities

- EMOTIONAL ISSUES

1 in 7 children aged 2-8 years
has a mental, behavioral, or
developmental disorder.

The number increases with the onset of puberty. (Depression, Bipolar Disorder, Eating Disorders, and Schizophrenia.)

SPEECH OR LANGUAGE IMPAIRMENT

Speech & Language Disabilities

- Speech disorders include disorders of voice, articulation, & fluency.
- Language disorders affect the student's ability to use language (phonology, morphology, syntax, semantics, & pragmatics).
- Over a million students have a speech or language disability.

Specific Learning Disabilities

VISUAL IMPAIRMENT INCLUDING BLINDNESS:

Includes both partial sight and blindness. If eyewear can correct a vision problem, then it doesn't qualify.

DEAF-BLINDNESS:

Dual diagnosis of both hearing and visual impairments require programs that offer extensive and intensive training.

Specific Learning Disabilities: Blindness

Specific Learning Disabilities

DEAFNESS:

Severe hearing impairment; unable to process language through hearing.

HEARING

IMPAIRMENT:

Refers to a hearing loss not covered by the definition of deafness. This type of loss can change or fluctuate over time.

Specific Learning Disabilities: Deafness

Specific Learning Disabilities

ORTHOPEDIC IMPAIRMENT

Mobility issues that limit an individual's movement. Examples include cerebral palsy, polio, muscular dystrophy.

INTELLECTUAL DISABILITIES

- Refers to below-average intellectual aptitude; may also have poor ability with communication, a lack of self-care and a deficiency in social skills. Down Syndrome is one example of an intellectual disability.

Specific Learning Disabilities: Orthopedic and Intellectual

Specific Learning Disability

TRAUMATIC BRAIN INJURY

- Generally caused by an accident or some kind of physical force.
- Can affect various parts of the brain including memory, executive function (organization), balance & coordination, mood, & sleep disorder

MULTIPLE DISABILITIES

- A child with multiple disabilities has more than one condition covered by **IDEA**. Having multiple issues creates educational needs that can't always be met in one program for any one condition.

Having examined the more common Learning Disabilities,

Learning Disabilities,

- for purposes of discussion, let's develop a common vocabulary and identify the various individuals involved in Special Education.

BACKGROUND: Vocabulary

- **Accommodations:** *Curricular adaptations that compensate e.g. Book on Tape/CD/DVD vs. Textbook*
- **Assistive Technology:** *Mobility devices as well information hardware and software*
- **504 Plan:** *Federal Legislation that guarantees civil rights protection to all individuals with disabilities, not just students*
- **I.E.P.:** *Individual Education Plan*

BACKGROUND: Vocabulary

- **I.E.P. Team:** *Includes Parents, Special Ed Teacher, General Ed Teacher, School Psychologist, Administrator; Others might include a translator, special services representative,*
- **LRE:** *Least Restrictive Environment*
- **Modifications:** *Curricular adaptations that change or lower expectations or standards*
- **Outcomes:** *Short term goals of IEP that are relevant, specific, and measurable*

BACKGROUND: Who's Who on I.E.P. Team

- School Administrator
- Regular Classroom Teacher
- Special Education Teacher
- School Psychologist
- School Nurse
- Counselor
- Speech Pathologist
- Occupational Therapist
- Physical Therapist
- Social Worker

Who's Who in I.E.P.

- **SCHOOL ADMINISTRATOR**

Represents the school system; Has knowledge of educational law

- **REGULAR CLASSROOM TEACHER**

- Provides curriculum for a child's grade level ;
Monitors child's needs, progress, and learning

Who's Who in I.E.P.

- **SPECIAL EDUCATION TEACHER**
- Either Resource <50%
Or Special Day Class
>50% of time; Separate remedial environment or within regular classrooms

- **SCHOOL PSYCHOLOGIST**
- Administers and interprets standardized achievement and aptitude tests.

Who's Who in I.E.P.

- **SCHOOL NURSE**

- Besides caring for sick and injured students, they also educate students on health care and growth and development.

- **COUNSELOR**

- Provide academic, career, college admission, and social-emotional support

Who's Who in I.E.P.

- **SPEECH PATHOLOGIST**
- Remediates speech and language problems (articulation, fluency, voice) as well as chewing and swallowing issues.

- **OCCUPATIONAL THERAPIST**
- Customizes plans to improve the person's ability to perform daily activities and reach their goals

Who's Who in I.E.P.

- **PHYSICAL THERAPIST**

Remediates impairments and promotes mobility and function; Gross and fine motor skills, balance, strength

- **SOCIAL WORKER**

Refer clients to additional resources, develop educational programs and support groups at schools.

Individual Education Plan (I.E.P.)

- The I.E.P. is developed to ensure that a child who has been identified with a learning disability receives specialized instruction and related services.
- It provides extensive information concerning the student and clearly defines the resources available and the outcomes to be expected.

Individual Education Plan (I.E.P.)

- **IDENTIFICATION:** Name, SSN, Age, DOB, Grade, Gender, Language, Parent(s), Contact Information (Phone, Text, Email, Address), Race
- **DISABILITY:** Primary, Secondary, Referred, Verified, Parental Consent, Eligibility Meeting, Dates(s)
- **PRESENT LEVELS OF ACADEMIC ACHIEVEMENT AND FUNCTIONAL PERFORMANCE:** Strengths, Preferences, Interests; Concerns of parents to educational progress

I.E.P. (Continued)

- **PRESENT LEVELS OF ACADEMIC ACHIEVEMENT AND FUNCTIONAL PERFORMANCE:** Results of Standardized Tests in Language Arts (Reading, Writing, Speaking, Listening, Research), Math (Concepts & Procedure, Problem Solving & Data Analysis, Communication Reasoning), Science, Physical Education
- **HEALTH:** Vision and Hearing Testing

I.E.P. (Continued)

- **PREACADEMIC/ACADEMIC/FUNCTIONAL SKILLS:** Communication Development, Fine and Gross Motor Skills, Social / Emotional / Behavioral, Vocational Skills, Adaptive/ Daily Living Skills, Health
- **DEVICES AND/OR SERVICES:** Assistive Technology Devices/Services; Low Incidence Services Equipment, Services, Materials

I.E.P. (Continued)

- **CONSIDERATIONS IF STUDENT IS ENGLISH LANGUAGE LEARNER:** English Language Mainstream, English Immersion, Primary Instruction
- **STUDENT BEHAVIOR:** Impede learning of self or others; Interventions? Strategies? Supports?

I.E.P. (Critical Part of the Plan)

- **AREA(S) OF NEED**
- **MEASURABLE ANNUAL GOAL(S)**
- **PROGRESS REPORTS: #1, #2, #3** → Summary of Progress and Comments
- **AREAS OF ASSESSMENT:** With or Without Accommodation, With or Without Modification; Other Options – Alternative Response Mode, Assistive Equipment/Device

I.E.P. (Continued)

- **ANNUAL REVIEW:** Goal(s) Met Comments:
- **SERVICE OPTIONS:** Considered by IEP Team;
Potential harmful side effects on child
- **SUPPLEMENTARY:** Aids, Services, Programs,
Accommodations, Modifications, and/or
Services

Start Date	End Date	Frequency	Duration	Location

I.E.P. (Continued)

- Participants' names, titles and date of each meeting are recorded.
- **PARENTAL AGREEMENT**
- I disagree with all parts.
- I agree with all parts except
- I decline the offer of special education services.
- I understand that my child is not eligible.
- I understand that my child is no longer eligible.

OUTCOMES: These goals are **S**pecific, **M**easurable, **A**ttainable, **R**elevant, **T**ime-Bound. They include a:

1. **Time Frame:** “by the annual review date”
2. **In Some Condition:** “when given 10 opportunities”
3. **Will Accomplish Something:** “will correctly identify the parts of a sentence”
4. **At Some Criterion Level:** “with 80% accuracy”
5. **Achievement Schedule:** “Every Term”

How these outcomes are applied, we focus on

- ACCOMMODATIONS and MODIFICATIONS.

WHAT'S WRONG WITH THIS PICTURE?

The I.E.P. will contain Accommodations and/or Modifications to the student's education plan.

- **ACCOMMODATIONS**

- *change how a student learns the material.*

They can help students learn the same material and meet the same expectations as their classmates.

- **MODIFICATIONS**

- *change what a student is taught or expected to learn. They are not the same expectations as those of other classmates.*

ACCOMMODATIONS can be made in

- Environment
- Schedule
- Teaching Technique
- Schedule
- Materials
- Learning Style
- Assignments

ACCOMMODATIONS

- Assistance
- Grading
- Testing
- Organization
- Behavior
- Therapy: Occupational / Physical
- Therapy: Speech / Language

*Fair isn't
everybody getting
the same thing.
Fair is everybody
getting what they
need to be
successful.*

ACCOMMODATIONS

- **ENVIRONMENT:**

- Change Seating?
- Change Group?
- Change Class?

- **SCHEDULE:**

- Activity Breaks
- Free Time After Task Completion
- Work with Student Before or After School
- Change Schedule

ACCOMMODATIONS: Teaching Techniques

- Vary Voice Volume
- Increase Eye Contact
- Hand on Shoulder Contact
- Circulate Around Room
- Use Visual Cues
- Provide Extra Examples
- Use Positive Reinforcement

ACCOMMODATIONS: Teaching Techniques

- Teach Through Child's Interest
- Individualized Instruction
- Model Expectations
- Peer, Cross-Age, and Adult Tutoring
- Repeat Instructions
- List Assignments/Instructions on Board and Individual Papers

ACCOMMODATIONS: Materials

- Timer
- Manipulatives
- Learning Game
- Computer
- Overhead Projector
- Word Banks
- Notebook for Personal Spelling Dictionary

ACCOMMODATIONS: Learning Style

- Limit Number of Oral Instructions
- Teach Note Taking Skills
- Provide Copy of Notes
- Cooperative Learning Groups
- Vary Reading Approach
- Alternatives to Writing
- Assignment Modifications
- Use Best Learning Modality

ACCOMMODATIONS: Assignments

- Simplify
 - Shorten
 - Fold Paper in $\frac{1}{2}$ or $\frac{1}{4}$
 - Highlight Parts
 - Alternate Assignment
 - Assignment Notebook
 - Enlarge Materials
 - Keep Work Sample
- Break Instructions / Narrative into Sections
 - Make Instructions Clearer, More Concrete, Simple
 - Use “Assignment Buddy” System
 - Use Student Helper/ Aides

Accommodations: Assistance

- Contact Parent(s)
- Consult Counselor
- Consult with Other Staff

ACCOMMODATIONS: Grading

- Pass / Fail
- Grade Percentage of Improvement
- Narrative Rather than Percentage
- No Handwriting Penalty
- No Spelling Penalty

ACCOMMODATIONS

- **ASSISTIVE TECHNOLOGY:** Designed for students with learning and attention issues, this is equipment, software, or product designed to increase, maintain, or improve the functional capabilities of a person with disabilities.

Types of Assistive Technology

Devices

ACCOMMODATIONS: Testing

- Extended Time
- Large Print or Screen Reading Technology
- Designated Reader
- Scribes to Transfer Answers
- Distraction-Free Rooms
- Give Responses in Oral Form

ACCOMMODATIONS: Testing

- Use Word Processor
- Mark Test with Highlighter
- Use Timer to Manage Time
- Answer Fewer Questions
- Create Alternative Assignments

ACCOMMODATION: Organization

- Tied to Executive Function Disorder (TBI): Problems with Time Management, Paying Attention, Switching Focus, Planning, Remembering Details, Inhibition

ACCOMMODATION: Behavior

- Behavior Accommodations are specific, consistent, deliberate interventions implemented by the classroom staff.
- They can be divided into four categories:
 - 1. Environmental
 - 2. Academic
 - 3. Instructional
 - 4. Sensory

ACCOMMODATION: Behavioral - Environmental

- Minimum visual/auditory distractions
- Seat near positive role model
- Visual boundaries on personal space
- Give adequate personal space in group work
- Close proximity to staff
- Designated space to “cool off”
- Alternative place to work independently

ACCOMMODATION: BEHAVIORAL -Environment

- Post and review expectations
- Establish consistent routines for everyday practices
- Allow student to choose from a variety of activities
- Provide “Peaceful Activities”
- Anticipate need for physical activity

ACCOMMODATION: BEHAVIORAL -Environment

- Be in close proximity during **Transitions**
- Give “X” minute before transition
- Make sure student has all materials at time of transition
- Make student leader of Team Transition

ACCOMMODATION: BEHAVIORAL - Academic

- Follow harder task with easier one
- Apply learning to real life situations
- Provide samples of work as models
- Provide list of materials needed for each activity
- Offer a list of resources (People, materials)
- Provide assigned tasks in small segments

ACCOMMODATION: BEHAVIORAL -Instructional

- Model appropriate responses in classroom
- Require student to begin assignment in designated period of time
- Assist student with beginning steps
- Allow student to act as peer tutor to another
- Have student repeat instructions before beginning activity
- Emphasize **student's** choice and responsibility

ACCOMMODATION: BEHAVIOR -Sensory

- Sensory Bin for exploration of textures, shapes
- “Fidget” items
- Minds in Motion, Yoga, Meditation
- Seat cushions / “wiggles”
- Low lighting / color lighting
- Stress Reduction Items
- Headphones
- White noise

ACCOMMODATION: OT / PT

- **Occupational Therapy OT**
- Additional time on assignments
- Alternative format (Oral to written)

- **Physical Therapy PT :**
- Easy, safe wheelchair entrance/ exit access
- Emergency Drill contingency plan
- Handicapable Furniture

ACCOMMODATION: Speech / Language Therapy

- Work with Speech Pathologist/Therapist to reinforce exercises
- Use written rather than oral assignments
- Allow extra time for students to express themselves
- Use assistive technologies
- Model good speech practices
- Minimize classroom noise & distractions

MODIFICATIONS

- While accommodations address how a child learns the curriculum, modifications change what the child is taught or expected to learn. Modifications:
 - 1. Change the academic standard expectations
 - 2. As such, the student learns less than peers.
 - 3. Thus, this may impact their future school success and job opportunities. However,

MODIFICATIONS (Continued)*

- There is a fine line between certain Accommodations and Modifications which can ease the effect. For example,

If testing for content knowledge, does it matter whether the format is written or spoken?

If student is not university-bound, are higher level maths necessary?

MODIFICATIONS (Continued) *

- The key with Modifications is that they be age-appropriate , related to the curriculum, and do not draw undue negative attention to the student with disabilities.
- *For example, a high school class is doing presentations on nutrition while the student with disabilities sits in the back of the room with a tub of lentils and rice to “explore”. Is this alright? Why?*

In the first part of this presentation,

We examined:

- 1. A historical perspective from Isolation to Institutionalization to Integration to Inclusion
- 2. The most common learning disabilities found in schools
- 3. The members of Special Education Staff
- 4. A sample of the information found with a Individual Education Plan (I.E.P.)

In the second part,

- we examined Accommodations and Modifications to the Individual Education Plan.

Let's examine the data ...

Research suggests that the number of children and youth ages 3–21 receiving special education services is 6.6 million, or **13 percent** of all public school students. It is believed that another **10 %** of students who would qualify for special education services are **not identified**. This figure also doesn't represent students who attend private schools or are home schooled.

The Data

- The **most common** are Dyslexia, ADHD, Dyscalculia, Dysgraphia, and Processing Disorders.
- About 4% have both a Learning Disability and ADD/ADHD.
- Two-thirds of students identified with Learning Disabilities are male.

Graphic Representation: 13%X (10%)

XxxxxxxxxxxxXxxxxxxxXxxxx
xXxxxxxxxxxxxXxxxxxxxxXxx
xxxXxxxxxxxxXxxxxxxxxxxx
xxxxXxxxxxxxxxxxxxxxxXxxxx
xXxxxxxxxxxxxXxxxxxxxxXxxx

The figure is more alarming

- ... when examining the total population. According to the 2010 U.S. Census, 56.7 million people or 19% of the population, fit the broad definition of “disabled”.

In India ...

- According to the World Health Organization, the total figure of people who are disabled is 25% which is lower than neighboring Bangladesh, which is 32%.

- INDIA

- BANGLADESH

Although, there are many reasons

- for this disparity, this presentation will only suggest a couple. Poverty and resulting issues of health, especially prenatal and childhood health should be noted as significant factors in the presence of learning disabilities and the need for special education. However, genetics also plays the dominant role.

Let's review the most common Learning Disabilities

- 1. Dyslexia
- 2. Dysgraphia
- 3. Dyscalculia
- 4. Processing Disorders
- 5. ADD/ ADHD

To review, DYSLEXIA

Dyslexia: Statistics

- One in 13 people have dyslexia. Many people have dyslexia but are unaware that they do.
- It is not tied to IQ. Einstein had a 160 IQ and dyslexia.
- It occurs in people of all backgrounds and speakers of every language although the rates vary.
- Dyslexia tends to run in families.

Dyslexia: Characteristics / Concepts / Competencies

- **Language:** Understand directions; Repeat what was just said; Stay on topic
- **Reading:** Understand written material; Read smoothly; Stay interested in stories
- **Writing:** Listen & take notes, Proofread
- **Socializing:** Deal with peer pressure; Interpret body language;
- **Other Skills Affected:** Filter out background noise; Maintain self-esteem; Spatial Concepts

Dyslexia: Action Plan

- **The Right Tools**

- Have students dictate stories/answers
- Headphones to avoid distraction
- THINK TIME before response
- Pre-teach and preview materials

- **Accommodations**

- Extra time to complete assignments/tests
- Set of texts @ home
- IT software
- Do not force participation in oral reading PREREAD JOB READY

SIMULATION

What letter is it?

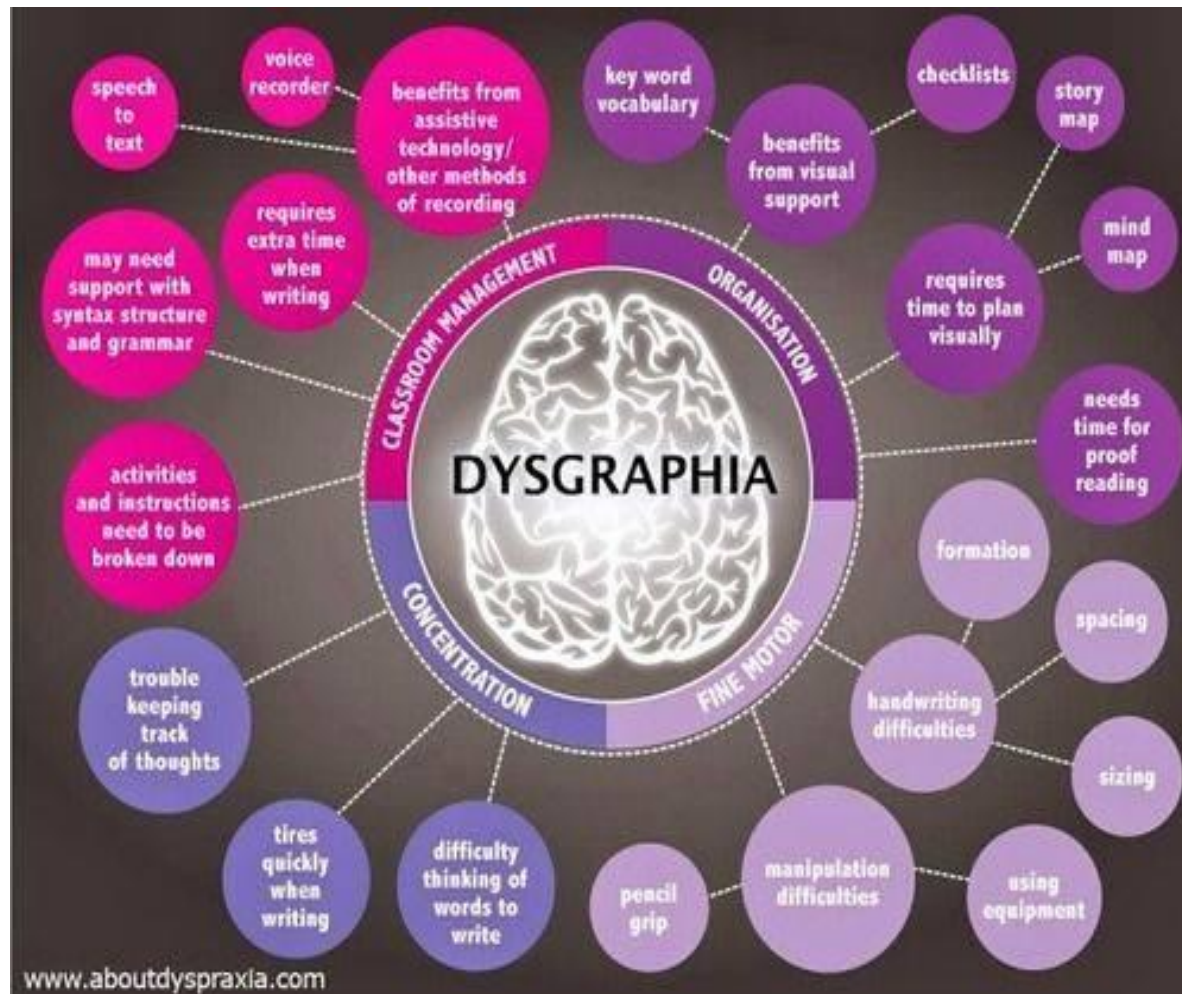

SIMULATION

- What letter is it? It could be a B, D, P, or Q.

To review, DYSGRAPHIA ...

Dysgraphia Statistics

- Not much research has been done. However, it is estimated that about 5% of all students have some type of handwriting deficit.
- There are different types of Dysgraphia: Motor, Spatial, Visual, and Phonological
- Poor drawing skills
- Often difficulty with physical activities

Dysgraphia: Characteristics / Concepts / Competencies

- Writing involves complex skills: 1. fine motor dexterity, 2. patterns associated with letters, 3. revisualization of letters
- Trouble tracking pen/pencil
- Often have memory capacity deficiency (short-term, long term, working memory)
- Inconsistent spacing between letters & words
- Tires while writing

DYSGRAPHIA: Action Plan

- **The Right Tools**
- Pencil Grips
- Slant Board
- Raised or Highlighted Paper
- Graphic Organizer
- iPad Apps

- **Accommodations**
- Work with an Occupational Therapist

Alternatives to Written Assignments

- Drawings
- Plays
- Videos
- Graphs
- Collages
- Concept maps
- Audio recordings
- Flow charts
- Simulations
- Models
- Board games
- Oral presentations
- Photographic essays
- Cartoon captions

blog.allaboutlearningpress.com/dysgraphia

SIMULATION

- 1. Write your name.
- 2. Write name with non-dominant hand.
- 3. Write name backwards.
- 4. Close eyes and write name forward.
- 5. Close eyes and write name backwards.

To review, DYSCALCULIA ...

Dyscalculia: Statistics

- Is present in about 5% of school age children
- It is associated cognitive dysfunction (e.g., impairment of working memory and visuospatial skills)
- About 20% to 60% of those affected have comorbid disorders such as dyslexia or attention deficit disorder
- It does not improve without treatment

Dyscalculia: Characteristics / Concepts / Competencies

- Quantity
- Number
- Symbol
- Calculation
- Operative Capacity
- Abstraction
- Numerospatial Conceptualization

DYSCALCULIA: Action Plan

- **The right tools:** Supportive tools and tech can help the child navigate difficult problems.
 - A calculator s/he knows how to use to verify
 - Pencils (for erasing!)
 - Graph paper to help him/her keep columns and numbers straight.
 - Pre-set phone reminders and alarms to help him/her keep track of time.
 - Math apps and games that allow him/her to practice essential skills in a fun way
- **Accommodations:** Work with the child's family to ensure s/he's able to access appropriate supports including:
 - Access to a calculator during class and tests
 - Extra time on tests
 - A quiet space to work
 - The option to record lectures
 - Access to the teacher's notes
 - Time in the math resource room (if his/her school offers one) In-school tutoring or homework assistance

DYSCALCULIA: Sidebar

- Math anxiety isn't exclusive to students with dyscalculia, but it is common among children with the disorder. One of the keys to helping students with dyscalculia is teaching them anxiety management strategies. With this is the issue of self-esteem. It is important to acknowledge the hard work and the struggle that the child experiences.

PROCESSING DISORDERS: Defined

- Difficulties in the way in which the brain integrates information. The data can be SPOKEN (Auditory), SEEN (Visual), or EXPERIENCE (Sensory).

PROCESSING DISORDERS: Statistics

- According to the National Institute of Health about 5% of school age children have **Auditory Processing Disorder**. In children with learning disabilities, it is 43%. (About 50% of children with dyslexia also have APD.) The percentage is probably higher because often children go undiagnosed or misdiagnosed (ADD/ADHD, Behavior Problems, etc.). Just because a child passes a hearing test, doesn't mean s/he does have APD.

PROCESSING DISORDERS: Auditory Characteristics / Concepts / Competencies

- Individuals with this disorder do not recognize subtle differences between sounds in words, even when the sounds are loud and clear enough to be heard.

PROCESSING DISORDERS

- Auditory: *Flamenco vs Flamingo*

Auditory Processing: Action Plan

- **The Right Tools**
- Rephrase rather than repeat
- Use images rather than words
- Seat away from window and doors; quiet area

- **Accommodations**
- Assistive Listening Device
- Extended time
- Non-verbal cues

Processing Disorders: Statistics

- **Visual Processing Disorder** affects about 10% of the population. It occurs in the brain, not the eyes. There can be weaknesses in the processing of the *visual* world including things like symbols, pictures and distances.
(Dyslexia affects the way the brain processes language.)

PROCESSING DISORDERS: Visual Characteristics / Concepts / Competencies

- Easily distracted with too much visual information
- Inattentive during visual presentations
- Lacks interest in movies /television
- Difficulty copying board notes
- Poor reading comprehension when reading silently
- Skips words/lines when reading

Visual Processing: Action Plan

- **The Right Tools**

- Give oral as well as written directions
- Use audio books
- Use charts, graphs, diagrams instead of paragraphs
- Use highlighter for important information

- **Accommodations**

- Provide class notes or note-taker
- Allow students to write answers on separate paper (more space)
- Accept oral rather than written reports

Processing Disorders: Statistics

- **Sensory Processing:** A condition affecting about 16% of elementary age children. It exists when the senses (sight, hearing, touch, smell, taste, balance, spatial orientation, and self-awareness) are not adequately processed in order to provide appropriate responses to the demands of the environment.

PROCESSING DISORDERS: Sensory Characteristics / Concepts / Competencies

- Caused by a deficiency in a person's ability to effectively use the information gathered by the senses. It can relate to general sounds or be language specific. It can also affect visual images.

- Others with sensory processing disorder may:
 - Be uncoordinated
 - Bump into things
 - Be unable to tell where their limbs are in space
 - Be hard to engage in conversation or play

Sensory Processing: Action Plan

- **The Right Tools**
- Research on Sensory Integration Therapy (SIT) suggests it is ineffective. Most other current methods appear to have questionable rationale and no empirical evidence to support.

- **Accommodations**
- Because of its comorbidity with other disabilities (Anxiety, ADHD, Behavioral Disorders, Autism Spectrum), many of the same accommodations regarding noise level and space apply.

ADD/ADHD Statistics

- ATTENTION DEFICIT DISORDER: A neuro-developmental condition characterized by problems with paying attention
- ATTENTION DEFICIT HYPERACTIVITY DISORDER is ADD with addition of excessive activity or trouble controlling behavior.
- They affect 5-7% of the population with ADHD three times more prevalent in males.

ADD/ADHD

Characteristics / Concepts / Competencies

- Significant problems functioning in at least two settings (e.g., social, school/work, or home)
- Be easily distracted, miss details, forget things, and frequently switch from one activity to another
- Become bored with a task after only a few minutes, unless doing something they find enjoyable

ADD / ADHD: Action Plan

- **The Right Tools**
- Help with Organization
- Attention Cues
- Segment Assignments
- Sectional color-coded binders
- Organize and check homework assignments before leaving class
- **RED ALERT: EARLY INTERVENTION**

- **Accommodations**
- Seating in front
- Repeat directions; have students repeat them
- Use visuals
- Schedule most difficult content early in the day
- Allow frequent breaks and squeeze ball
- Include movement in lesson

ADD/ADHD

Characteristics / Concepts / Competencies

- Have difficulty focusing attention on organizing or completing a task
- Have trouble completing or turning in homework assignments, often losing things (e.g., pencils, toys, assignments) needed to complete tasks or activities
- Appear not to be listening when spoken to
- Daydream, become easily confused, and move slowly

As a means of conclusion,

- let's consider some of the guiding principles and best overall practices in Special Education today.

Guiding Principles of Special Education

- The Individuals with Disabilities Education Act (IDEA) ensures that all children with disabilities are entitled to a **Free Appropriate Public Education (FAPE)** to meet their **unique needs** and prepare them for further **education, employment, and independent living.**

Guiding Principles

- **FREE:** No cost to family
- **APPROPRIATE:** Specific to individual child's needs
- **PUBLIC EDUCATION:** Provided locally
- **EDUCATION:** Contains knowledge and skills
- **EMPLOYMENT:** Can be applied in workplace
- **INDEPENDENT LIVING:** Allows for self-sufficiency

Unique Needs

- The unique needs which we call disabilities are **physical** or **mental** conditions that **limit** a person's **movements, senses, or activities**. As such, they can impact a variety of aspects of an individual's everyday life.

Best Practices in Special Education

- **With Regard to Services:** Need for Clarity in Conceptualization, Organization, and Delivery. Moreover, participants must :

- 1. Understand human behavior
- 2. Have ability to problem solve through collaborative planning
- 3. Be familiar with the principles of organizational change

Current Trends in Special Education

- 1. Zero Reject Policies
- 2. Nondiscriminatory Evaluation
- 3. Appropriate Education
- 4. Inclusion and Collaboration Movements

Zero Reject Policies

- An educational philosophy which says that no child can be denied an education because they are "uneducable". One of the six core principles of Individuals with Disabilities Education Act (IDEA) states that no child with a disability can be denied a free appropriate public education.

Nondiscriminatory Evaluation

- Assessment of progress by student with disability must be unbiased and multifactored methods of evaluation and must not discriminate on a basis of race, culture, gender, or native language.

Appropriate Education

- As applied, this can range from “receive some educational benefits” to “maximize the child’s educational potential”.
- Recent court cases suggest that “accommodations and modifications be provided to give the student the greatest chance of progressing toward grade-level performance standards”.

Special Education Teacher Retention and Attrition: A Review of the Literature

- What do you believe are the Top Four Reasons WHY Special Education Teachers remain or leave the profession?

Special Education Teacher Retention and Attrition: A Review of the Literature

- 1. Teacher Characteristics and Personal Factors
- 2. Teacher Qualifications
- 3. Work Environment
- 4. Teachers' Affective Reactions to Work

A greater percentage of Special Education Teacher leave than teachers in regular classrooms.

- External Factors: Economic, Societal, Institutional and/or Employment: Professional Qualifications, Work Conditions and Rewards, Commitments to School, District, Teaching Profession
- ISOLATION = CO-TEACHING
- CLASS SIZE = 20 ISN'T WORKABLE 15 IS BETTER; DEPENDENT ON LEVEL OF DISABILITY
- IT'S NOT RATIO
- FOCUS ON ONE AREA ONLY ; TEACH TO THEIR STRENGTHS --. SING INSTEAD OF WRITE
- GO IN FOR WROMG REASONS – SAVE THE WORLD, VACATIONS

Please Continue ...

- To do the critically important work that you with our students with special needs.

Beginning Sounds

- Using three letter sight words, this activity can be applied to beginning, ending and vowel sounds.
- *Bat*
- *Cat*
- *Can*
- *Ran*
- *Rat*

Rhyming and Alliteration

Rhyming activity

(Clap the rhyming words)

Read a poem or sing a song with rhyming words.

Students clap each time they hear a word that rhymes.

© 2012 Linda F. Barbara All Rights Reserved

<h3>All About Alliteration</h3>	<h3>What is alliteration?</h3> <p>Alliteration is the repetition of a consonant sound at the beginning of words e.g. Angry Alice attacks ants.</p>	<h3>Alliteration in familiar phrases.</h3> <p>Many common phrases use alliteration e.g. 'hale and hearty, fit as a fiddle, down in the dumps and turn the tables.</p>	<h3>Alliteration in tongue twisters.</h3> <p>Tongue twisters rely on alliteration e.g. 'She sells sea shells on the sea shore.</p>	<h3>Alliteration in stories.</h3> <p>Authors use alliteration in a story to emphasise points or just to make it fun to read! 'Back in time for breakfast, my backpack blasted with booty.' DC Green.</p>
<h3>Headlines and Advertisements.</h3> <p>Alliteration makes phrases easy to remember so businesses use them to sell products and newspapers. Pick up a Penguin, You'll never put a better bit of butter on your toast!</p>	<h3>Characters, Cartoons and Comics!</h3> <p>Names of famous people and characters often use alliteration: Oggy Duck, Mickey Mouse, Peter Parker, Clark Kent, Doctor Doom and the Fantastic Four to name a few!</p>	<h3>Alliteration in Poetry</h3> <p>Alliteration is one of the poet's most important sound techniques. It makes particular words stand out. It also connects the words to be emphasised.</p> <p><i>There is an old man with white hair Who has a beard like a tree And a nose like a trumpet And a smile like a flower And a voice like a bell And a heart like a lion And a soul like a star And a name like a song.</i></p>	<h3>The sun sizzled for the swimmer's start.</h3>	<h3>Dainty dogs danced for the cheering crowd.</h3>
<h3>The roaring river rushed right riders onwards.</h3>	<h3>Busy bees buzzed between beautiful blossoms.</h3>	<h3>Great gnomes grew grey beards.</h3>	<h3>Eight enormous elephants escaped!</h3>	<h3>Naughty Nick was never nice.</h3>
<h3>A party of pretty parrots perched on bumpy brown branches.</h3>	<h3>Three thirsty toads drank dew drops.</h3>	<h3>The wild wind whistled through towering tree tops.</h3>		

Phonics teaches readers to decode written words.

- It is most effective when instruction begins in kindergarten. Learning phonics benefits children of all ages, social classes, and abilities.

- **f = ph = gh**
- fool = phone = cough

Expect the best....

Thank you!
